HCLTech Q1 profit slips 10% to ₹3,843 cr

Noida-based IT services exporter raises lower end of its guidance to 3-5% on constant-currency basis

AVIK DAS
Bangalore, 14 July

HCLTech, India's third-largest information-technology (IT) services firm, on Monday reported net profit for the first quarter of 2025-26 at ₹3,843 crore, down 9.72 per cent year-on-year.

On a sequential basis profit was down 10.7 per cent. It reported 3.7 per cent constant-currency revenue growth for the April-June quarter, helped by its technology and services, telecommunications and media, and financial services.

These more than offset the sluggishness in manufacturing and the life-sciences vertical.

For the quarter ended June 30, HCL reported revenue of ₹30,349 crore, up 8.2 per cent over that in the same period a year earlier.

The value of the new deal bookings stood at \$1.81 billion. That also helped India's third-largest IT services exporter to raise the lower end of its guidance. HCL now expects to grow 3-5 per cent on a constant-currency basis for the full year, up from 2-5 per cent it had projected in April.

However, the firm cut its EBIT (earnings before interest and tax)

margin guidance to 17-18 per cent from 18-19 per cent earlier. The company said the margins would be impacted due to restructuring.

"The macro environment remained stable from an overall perspective, with some variations across verticals, but the overall situation did not deteriorate as feared at the start of the quarter," said C Vijayakumar, chief executive officer (CEO) and managing director, at a news conference.

"We won a large consolidation deal in financial services this quarter, which is not accounted for in the total contract value (TCV) for the first quarter," Vijayakumar added.

"We have some large deals in the pipeline which were expected to close in Q1 but have moved to the second quarter. This delay is unrelated to the external or macro factors. We are optimistic about this conversion, and if all goes according to plan, the TCV numbers should see a stepup in the coming quarters."

Financial services were up 6.8 per cent, technology 13.7 per cent, and telecommunications 13 per cent. The manufacturing and life sciences verticals were down 1 per cent and 4 per cent, respectively, because uncer-

Facing headwinds

Consolidated figures	₹ crore	Change %	
		Q1FY26	Q-o-Q

Compiled by BS Research Bureau

tainties persisted in those sectors owing to concerns over trade tariffs.

While growth in the United States, the biggest market that contributes about 60 per cent to the top line, remained muted, Europe was up 9.6 per cent while business from other geographies, excluding India, was up 15 per cent.

"Steady bookings, artificial intelligence/GenAI adoption, a robust pipe-

line and management commentary on non-deterioration of demand environment position it well for FY26. While near-term uncertainties may impact discretionary spending, HCLTech's diversified portfolio and AI-driven solutions ensure long-term growth potential," wrote Shaji Nair, research analyst, Mirae Asset Sharekhan. Operating margins, however, dropped to 16.3 per cent from 17.1 per

cent year-on-year.

"The margins were lower than what we had planned. While Q1 has been historically low for us, the margins were below expectations as utilisation dropped due to a delay in rampup of a specific programme. We also encountered rampdowns in specific areas. Also there was a demand supply mismatch between skills and locations and a client bankruptcy," the CEO said.

The headcount dropped by 269 to stand at 223,151 at the end of June, while attrition remained flat sequentially at 12.8 per cent.

The company took on board 1,984 fresh engineering graduates in the last three months. HCL will also add people with specialised skills in AI, cybersecurity, and digital engineering. They will account for 15-20 per cent of fresh hiring.

"We will also be undertaking some restructuring in facilities which we are not utilising outside India which are related to acquisitions. Also there will be some talent ramp downs in some geographies outside India and expect during the second and third quarter and a small part in the last," Vijayakumar added.

Intellect Design eyes ₹1K cr revenue from its AI platform

AASHISH ARYAN
New Delhi, 14 July

Intellect Design Arena is targeting a revenue of ₹1,000 crore over the next four years from its artificial intelligence (AI) platform, Purple Fabric, said Chairman and Managing Director Arun Jain.

Though the entire research and development (R&D) process for Purple Fabric took about 10 years, the company started offering it as a tool to clients from 2021-22. It managed to sign nearly 45 customers for the offering.

It was only in 2025 that the company started the tool as an entirely separate platform, Jain said.

"Within the last two-three months, we have had 400 enquiries. At Intellect Design, we sign about 50 deals per year. But with Purple Fabric alone, we should be signing 100 deals per year. We want to keep the platform within the larger company (Intellect Design) umbrella because there are many synergies," Jain said.

The business impact platform can help banking, financial services and insurance (BFSI) companies create custom-built AI agents that have been trained on proprietary enterprise data. It leverages a multi-agent

architecture, allowing AI teams to collaborate dynamically, he said. Jain, who also founded the Polaris Group, said that the Purple Fabric platform of Intellect Design had four major pillars, namely enterprise knowledge garden, digital experts, governance, and model optimisation.

The platform has close to 70 ready-to-deploy digital experts that can be customised and used individually with each other according to a client's needs, Jain said.

"It is sort of like assembling furniture. Most of the bigger parts, such as legs, will be the same. The room size in an Indian house will be different compared to the US, so there will be some modulation. Our approach is similar. Each microservice is like a component that we have developed," he added.

Intellect Design reported revenue of ₹2,577 crore in the last financial year, with a growth of 11 per cent year-on-year (Y-o-Y). The company's licence revenue grew 13 per cent Y-o-Y, while the product maintenance revenues saw a growth of 12 per cent.

Although the company has primarily focused on the banking sector for years, it also plans to expand into retail and digital commerce transformation.

Ola Electric loss widens 23%, revenue slumps 50%

Shares, however, jumped nearly 19% on Monday after the company forecast improved gross margins for FY26

PEERZADA ABRAR
Bangalore, 14 July

Ola Electric Mobility posted a deeper net loss for the April-June quarter (Q1) of 2025-26 (FY26), as the electric scooter maker contended with a sharp drop in revenue. The company reported a consolidated loss of ₹428 crore, widening 23 per cent from ₹347 crore in the same period a year earlier.

Revenue from operations slumped nearly 50 per cent to ₹828 crore, down from ₹1,644 crore a year ago. The steep decline in sales was partially offset by cost-cutting measures, with total expenses falling 42 per cent year-on-year (Y-o-Y) to ₹1,065 crore.

The results highlight the challenges facing India's electric vehicle sector as it grapples with softening demand and heightened competition, even as firms push to scale production and capture market share. Ola's market share is slipping amid rising competition from incumbents like Bajaj Auto and TVS Motor Company.

While losses widened Y-o-Y, the company's net loss declined by more than 50 per cent on a quarterly basis. During the quarter under review, the company also reported a positive earnings before interest, tax, depreciation, and amortisation (Ebitda). "The company's automotive (auto) business turned Ebitda-positive in June, on the back of strong gross margins

Scorecard

Ola Electric's key financials

₹ cr	Q1 FY25	Q4 FY25	Q1 FY26

Compiled by BS Research Bureau

owing to the company's vertical integration strategy," it said in a statement.

Ola Electric delivered a total of 68,192 vehicles in Q1FY26, up from 51,375 units in the fourth quarter (Q4) of 2024-25 (FY25), marking an increase of 32.7 per cent quarter-on-quarter.

The auto segment Ebitda improved sharply to 11.6 per cent, compared to -90.6 per cent in the fourth quarter (Q4) of FY25, with June mark-

ing the first Ebitda-positive month for the auto business.

Consolidated Ebitda also saw a substantial recovery to -28.6 per cent from the previous quarter. The company's cost-optimisation initiative, Project Lakshya, has driven major operating efficiencies, reducing monthly auto operational expenditure (opex) from ₹178 crore to ₹105 crore. Consolidated opex now stands at ₹150 crore per month, with a further reduction to ₹130 crore per month targeted through FY26. Operating cash flow for the auto business was nearly neutral in Q1, and free cash flow improved to ₹107 crore — a marked improvement from ₹455 crore in Q4.

Ola Electric's product road map continues to show strong customer traction. The newly introduced Gen 3 scooters accounted for 80 per cent of total scooter sales during the quarter. These scooters have not only delivered better margins but have also sharply reduced warranty claims, reflecting the company's ongoing engineering improvements.

Meanwhile, the rollout of Ola Electric's Roadster X motorcycles is progressing in phases, with the product now available in 200 stores across India and set to scale further during the upcoming festival season. On the software front, MoveOS+ adoption surged to nearly 50 per cent among new customers, up from 2 per cent in Q4.

One of Ola Electric's most significant technological advancements is the in-house production of its 4680 Bharat Cell, which will begin

powering vehicles starting this Navratri. The company expects that by the end of FY26, it will fully utilise the 1.4 gigawatt-hour (GWh) capacity and install the remaining capacity to reach 5 GWh, scaling consumption to that level through 2026-27.

The company has also successfully developed Heavy Rare Earths-free motors, scheduled for production deployment in the third quarter of FY26. These initiatives, enabled by the company's deep investment in vertical integration and research and development, are aimed at reducing costs and enhancing performance.

For FY26, the company expects to sell between 325,000 and 375,000 vehicles and generate revenue of ₹4,200-4,700 crore. With production-linked incentive benefits kicking in from the second quarter (Q2) for the Gen 3 product portfolio, gross margin is projected to rise to 35-40 per cent, and the company anticipates full-year auto Ebitda of over 5 per cent. It also expects the auto business to remain Ebitda-positive from Q2 onwards.

Shares of Ola Electric jumped nearly 19 per cent on Monday's trading session after the company forecast improved gross margins for fiscal 2026 after posting a narrower sequential loss for the first quarter, helped by stronger sales of its newer, more cost-efficient scooter models. Ola met its top-line guidance and reported a sequential growth of over 35 per cent from ₹611 crore in the March quarter.

The stock gained after five consecutive days of fall.

Framework issued for surplus asset transfer of 3 telecom PSUs to Centre

PRESS TRUST OF INDIA
New Delhi, 14 July

A high-level committee has outlined the framework for the transfer of surplus land and buildings of telecom PSUs — BSNL, MTNL and ITI to central government organisations without auction.

The proposal was cleared at a meeting of Committee of Secretaries in June, which also decided that any central government organisation keen on acquiring any such property would be required to submit their interest, along with stipulated approvals and a deposit (2 per cent earnest money deposit) of the indicative value to register their claim.

This process needs to be completed within 90 days from the notification of the asset on the asset monetisation website.

Central government organisations will enjoy the right of first refusal, but after 90 days of notification, Bharat Sanchar Nigam, Mahanagar Telephone Nigam and ITI will be free to dispose of the property to any other non-government buyer.

"As per government policy, surplus land/building assets of PSUs of DoT are being

monetised...In a recent meeting of Committee of Secretaries chaired by Cabinet Secretary on June 12, 2025, it was decided that BSNL/MTNL/ITI may transfer their immovable assets to Central Government/Central Government organisations without auction," Telecom Secretary Neeraj Mittal said in a note circulated to secretaries of various ministries and departments.

The Department of Telecom (DoT) urged ministries to inform their departments and PSUs accordingly, noting "it has time-bound action to be initiated by them in case they wish to take their assets".

Govt extends additional charge of Robert Ravi Jerard as CMD of BSNL, MTNL
The government has extended the additional charge of DoT senior official Ravi A Robert Jerard for the second time as chairman and managing director of telecom PSUs BSNL and MTNL, a regulatory filing said on Monday.

Jerard was appointed chairman and managing director (CMD) of the telecom public sector units on July 14, 2024, after the Appointment Committee of Cabinet denied extension to the then CMD PK Purwar.

Temasek looks to bet \$3-4 bn a year on India

On ongoing tariff negotiations between India and the US, Lambah said these were unlikely to affect the company's portfolio in India. "We think the peak of high tariff rates is behind us after Liberation Day," he said. "Most of our companies are focused on India's domestic market and are insulated from global tariff changes."

On exits, Lambah said robust equity markets had enabled profitable outcomes. "We don't have any preset timeline like private equity firms," he said. "We think about IPOs when companies are ready, and the timing and valuations work for both existing and new shareholders."

Temasek is evaluating IPO plans for portfolio companies such as Manipal Hospitals and Haldiram.

"These are large offerings, and the board and shareholders will work out the right timing," Lambah said. "Given where markets are, the next 12 to 18 months look promising for public listings."

On returns on investment, Lambah said that compared to Singapore's sovereign wealth fund, GIC, the firm's focus was to invest at the higher end of the risk spectrum, which means Temasek too targets higher returns.

"Over the long term, since inception, our portfolio has delivered returns of 15 per cent (measured in dollars) annually. That's more than 50 years of strong compounding, which we believe is a solid performance over such a long horizon," he said.
